⚠ Cautions on the monitor:

- The monitor built into this unit has been produced with high precision, but it may have some ineffective dots. This is inevitable and is not considered defective.
- Do not expose the monitor to direct sunlight.
- Do not operate the touch panel using a ball-point pen or similar tool with a sharp tip. Touch the buttons on the touch panel with your finger directly (if you are wearing a glove, take it off).
- When the temperature is very cold or very hot...
 - Chemical changes occur inside, causing malfunction.
 - Pictures may not appear clearly or may move slowly. Pictures may not be synchronized with the sound or picture quality may decline in such environments.

For safety...

- Do not raise the volume level too much, as this will make driving dangerous by blocking outside sounds, and may cause hearing loss.
- Stop the car before performing any complicated operations.

Temperature inside the car...

If you have parked the car for a long time in hot or cold weather, wait until the temperature in the car becomes normal before operating the unit.

DIGITAL RADIO (DAB) (Only for DDX5015DAB)

About DAB (Digital Audio Broadcasting)

What is DAB system?

DAB (Digital Audio Broadcasting) is one of the digital radio broadcasting systems available today. It can deliver digital quality sound without any annoying interference or signal distortion. Furthermore, it can carry text and data.

In contrast to FM broadcast, where each program is transmitted on its own frequency, DAB combines several programs (called "services") to form one "ensemble."

The "Primary component" (main radio station) is sometimes accompanied by a "secondary component" which can contain extra programs or other information.

CONNECTION/INSTALLATION

Before installing the unit

⚠ WARNING

- If you connect the ignition wire (red) and the battery wire (yellow) to the car chassis (ground), you may cause a short circuit, that in turn may start a fire. Always connect those wires to the power source running through the fuse box.
- Do not cut out the fuse from the ignition wire (red) and the battery wire (yellow). The power supply must be connected to the wires via the fuse.

⚠ Precautions on installation and connection

- Mounting and wiring this product requires skills and experience. For best safety, leave the mounting and wiring work to professionals.
- Make sure to ground the unit to a negative 12 V DC power supply.
- Do not install the unit in a spot exposed to direct sunlight or excessive heat or humidity. Also avoid places with too much dust or the possibility of water splashing.
- Do not use your own screws. Use only the screws provided. If you use the wrong screws, you could damage the unit.
- If the power is not turned on ("Miswiring DC Offset Error", "Warning DC Offset Error" is displayed), the speaker wire may have a short circuit or have touched the chassis of the vehicle and the protection function may have been activated. Therefore, the speaker wire should be checked.

- If your car's ignition does not have an ACC position, connect the ignition wires to a power source that can be turned on and off with the ignition key. If you connect the ignition wire to a power source with a constant voltage supply, such as with battery wires, the battery may be drained.
- Only for DDX7015BT/DDX7015BTM/DDX715WBT/DDX715WBTM:
If the console has a lid, make sure to install the unit so that the monitor panel will not hit the lid when closing and opening.
- If the fuse blows, first make sure the wires are not touching to cause a short circuit, then replace the old fuse with one with the same rating.
- Insulate unconnected wires with vinyl tape or other similar material. To prevent a short circuit, do not remove the caps on the ends of the unconnected wires or the terminals.
- Connect the speaker wires correctly to the terminals to which they correspond. The unit may be damaged or fail to work if you share the \ominus wires or ground them to any metal part in the car.
- When only two speakers are being connected to the system, connect both connectors either to the front output terminals or to the rear output terminals (do not mix front and rear). For example, if you connect the \oplus connector of the left speaker to a front output terminal, do not connect the \ominus connector to a rear output terminal.
- After the unit is installed, check whether the brake lamps, blinkers, wipers, etc. on the car are working properly.
- Mount the unit so that the mounting angle is 30° or less.
- Do not press hard on the panel surface when installing the unit to the vehicle. Otherwise scratches, damage, or failure may result.

- This unit has a cooling fan to decrease the internal temperature. Do not mount the unit in a place where the cooling fan of the unit is blocked. Blocking these openings will prevent the cooling of the internal temperature and result in malfunction.

⚠ CAUTION

Install this unit in the console of your vehicle. Do not touch the metal part of this unit during and shortly after the use of the unit. Metal parts such as the heat sink and enclosure become hot.

 - On the side of the vehicle (e.g. doors, front-side windows)
 - On rear windows
- Signal strength will decrease in the following locations:
 - On IR reflecting glass or where covered with mirror type glass film
 - Where it overlaps with the standard radio antenna (pattern)
 - Where it overlaps with window heating wires
 - Where glass that blocks radio signals (e.g. IR reflecting glass, thermal insulation glass) is used
- Poor reception may occur:
 - Due to noise when the windshield wipers, air conditioner, or motor is turned on
 - Depending on the location of the broadcast station in relation to the vehicle (antenna)
- Thoroughly wipe oil and dirt from the surface where the antenna will be attached with the included cleaner (13).
- Do not bend or damage the film antenna (10).
- It may not be possible to install the antenna in some types of vehicle.
- Check the cable routing of the film antenna (10) and amplifier unit (11) before attaching.

❑ Installation overview

The antenna should be installed on the passenger side for safety.

CONNECTION/INSTALLATION

❑ Determining the antenna installation location

- The direction of the film antenna (10) changes depending on whether it is installed on the right side or left side.
- Be sure to check the installation location of the film antenna (10) before installing. The film antenna cannot be reattached.
- Install the antenna at least 100 mm away from other antennas.
- Do not attach the amplifier unit (11) to the ceramic line (black part) around the windscreen, as it will not stick sufficiently.

Installing the antenna on the left side

Installing the antenna on the right side

- * Attach the earth sheet of the amplifier unit (11) to the metal part of the front pillar.

❑ Installing the Digital Radio antenna

⚠ Caution

When installing the antenna cable inside a front pillar that contains an air bag

- The front pillar cover is secured with a special clip which may need to be replaced when it is removed. Contact your vehicle dealer for details on removing the front pillar cover and availability of replacement parts.

- Install the amplifier unit (11) above the air bag so that it does not obstruct the operation of the air bag.

1 Remove the front pillar cover of your car.

2 Clean the windscreen with the supplied cleaner (13).

- Wait until the glass surface is completely dry before attaching.
- If the glass surface is cold, e.g. in winter, warm it with the defroster or a hair dryer.

3 Remove the first sheet (tag 1) on the film antenna (10) horizontally and attach the antenna to the windscreen.

Do not touch the adhesive side of the film antenna (10).

CONNECTION/INSTALLATION

- 4** Rub the film antenna (10) gently in the direction of the arrow shown below to firmly stick it to the windscreen.

- 5** Remove the second sheet (tag 2) on the film antenna (10) vertically.

- 6** Match the protrusions of the amplifier unit (11) with the ◀ markings on the film antenna (10) and attach the amplifier. Do not touch the lead terminal or the adhesive side of the amplifier unit (11).

When installing the antenna on the right side

When installing the antenna on the left side

- 7** Remove the film covering the earth sheet and attach the earth sheet to the metal part of the vehicle. Provide sufficient space for the earth sheet so that it does not obstruct the interior parts (front pillar cover). Also take care that the interior parts do not obstruct the amplifier unit (11).

- 8** Wire the antenna cable. Use cable clampers (12) to secure the antenna cable to the pillar in several places.
- 9** Reattach the front pillar cover. Be sure not to damage the earth sheet and amplifier unit (11) when reattaching.
- 10** Connect the amplifier unit (11) to the DAB input terminal on the rear of the unit.
- 11** Set <Antenna Power> to [ON].

Maintenance

❑ Caution on cleaning the unit

Do not use any solvent (for example, thinner, benzine, etc.), detergent, or insecticide. This may damage the monitor or the unit.

Recommended cleaning method:

Gently wipe the panel with a soft, dry cloth.

❑ Moisture condensation

Moisture may condense on the lens inside the unit in the following cases:

- After starting the heater in the car.
- If it becomes very humid inside the car.

Should this occur, the unit may malfunction. In this case, eject the disc and leave the unit turned on for a few hours until the moisture evaporates.

❑ How to handle discs

- When removing a disc from its case, press down the center holder of the case and lift the disc out, holding it by the edges.

- Always hold the disc by the edges. Do not touch its recording surface.
- When storing a disc in its case, gently insert the disc around the center holder (with the printed surface facing up).
 - Make sure to store discs in their cases after use.

❑ To keep discs clean

Dirty discs may not play correctly.

If a disc does become dirty, wipe it with a soft cloth in a straight line from the center to the edge.
